

SOPHISTICATED WORKPLACE TECHNOLOGY FOR ALDERMANBURY HOUSE

Delivering intuitive AV within a thoughtfully designed Yorkshire workplace

When **This Is Interiors** was appointed to redesign the 8,800 sq ft fourth floor at **Aldermanbury House**, the vision was to create a sophisticated, future-focused workplace that balanced professionalism, wellbeing and flexibility. The scheme introduced a variety of work settings, including open-plan workstations, meeting rooms, cellular offices, phone booths and dedicated wellbeing spaces, all carefully designed to support different styles of working throughout the day. A refined material palette layered lighting scheme and thoughtful spatial planning combined to create an environment that feels both professional and welcoming.

Delivered by **Ultimate Commercial Interiors**, the refurbishment brought together workplace design, fit-out and technology to create a seamless employee experience. Appointed by Ultimate Commercial Interiors, Universal AV was responsible for the meeting room technology throughout the space, ensuring every room supported modern collaboration while remaining sympathetic to the wider design vision.

Working closely with the project team, Universal AV delivered intuitive AV solutions that enable seamless presentations, content sharing and hybrid meetings, helping users connect and collaborate with confidence. By integrating technology as part of the overall workplace experience rather than treating it as a standalone element, the finished spaces combine functionality with design, supporting the needs of today's workforce without compromising the aesthetic quality of the environment.

SERVICES PROVIDED

TECHNOLOGY DESIGNED TO SUPPORT COLLABORATION

Meeting spaces at Aldermanbury House were designed to support productive collaboration, whether employees were meeting in person, presenting content or connecting with remote colleagues. Working alongside **Ultimate Commercial Interiors** and **This Is Interiors**, Universal AV delivered intuitive meeting room technology that provides a consistent user experience throughout the workplace.

Key elements of the solution included:

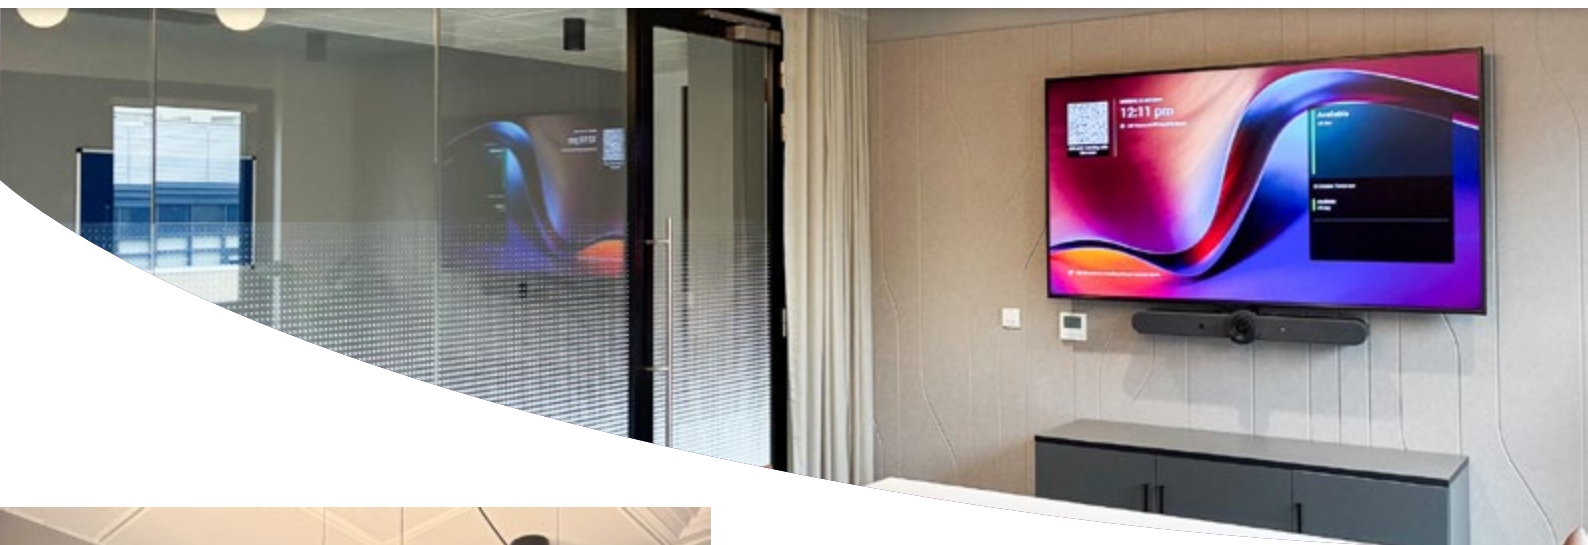

- Professional presentation and content-sharing capabilities
- Video conferencing technology for hybrid meetings
- Simple, intuitive room controls
- Consistent user experiences across meeting spaces
- Seamlessly integrated AV that complements the interior design

Rather than becoming a focal point within the space, the technology was designed to work quietly in the background, enabling effective communication and collaboration while supporting the overall workplace experience.

CREATING A WORKPLACE FIT FOR THE FUTURE

The completed refurbishment has transformed the floor into a modern, people-focused workplace that supports both employee wellbeing and business performance. By combining thoughtful interior design, quality fit-out and intuitive technology, the

project provides a flexible environment that can adapt to the changing needs of its users.

“The most successful workplace projects are those where every discipline is working towards the same goal. At Aldermanbury House, This Is Interiors created a fantastic design vision and Ultimate Commercial Interiors delivered it to an exceptional standard. Our role was to ensure the technology complemented that environment, giving users meeting spaces that feel simple, intuitive and reliable while supporting the overall workplace experience.”

Nick Fitzpatrick
Managing Director, Universal AV

The result is a workplace where design, fit-out and technology work seamlessly together, creating an environment that is professional, flexible and ready for the future.
